

PIXEL MIRROR

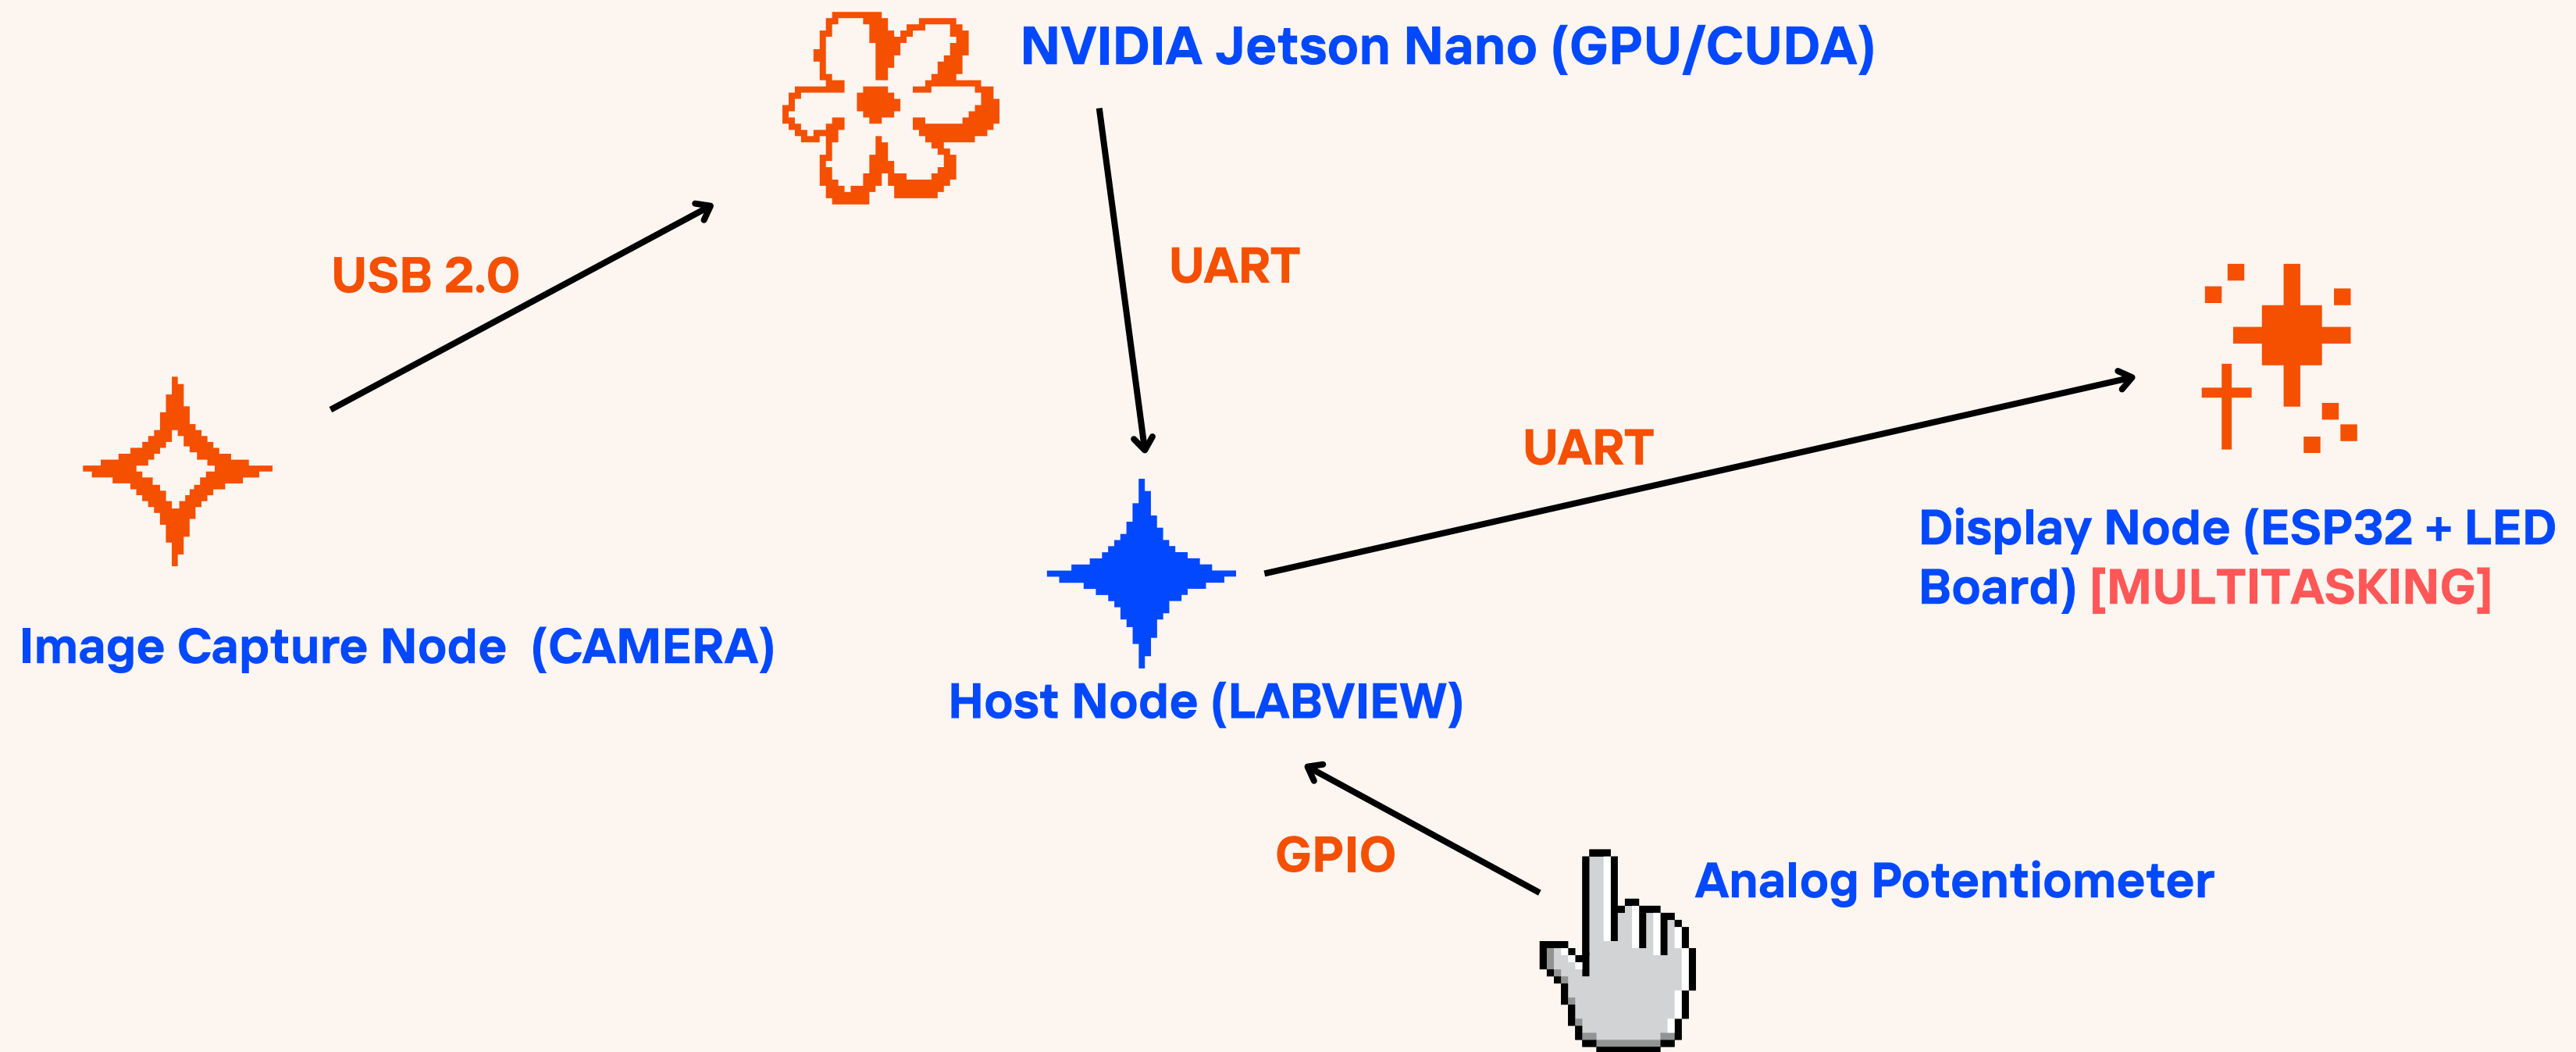

ME 135/235

STEPH AKAKABOTA, WEN CAO, KYLE NELSON, LARRY HUI

INPUTS + OUTPUTS (HARDWARE)

COMMANDS

I (Identify)

Triggers the ESP32 to send back a device identification string ("ESP32").

T (Threshold & Filters)

A compound command used to update image processing parameters. It can take multiple values in a single string

T[Value]

Sets the threshold_value

L[Value]

Sets the blur_value

M[Value]

Sets the min_area_value

A (Display On)

Sets display_enabled to 1 and returns "DISPLAY:ON"

B (Display Off)

Sets display_enabled to 0 and returns "DISPLAY:OFF".

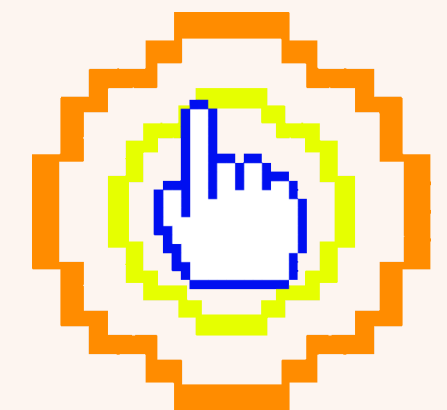

R (Reset)

Reverts all filter values (threshold, blur, min_area) to their default hardcoded settings

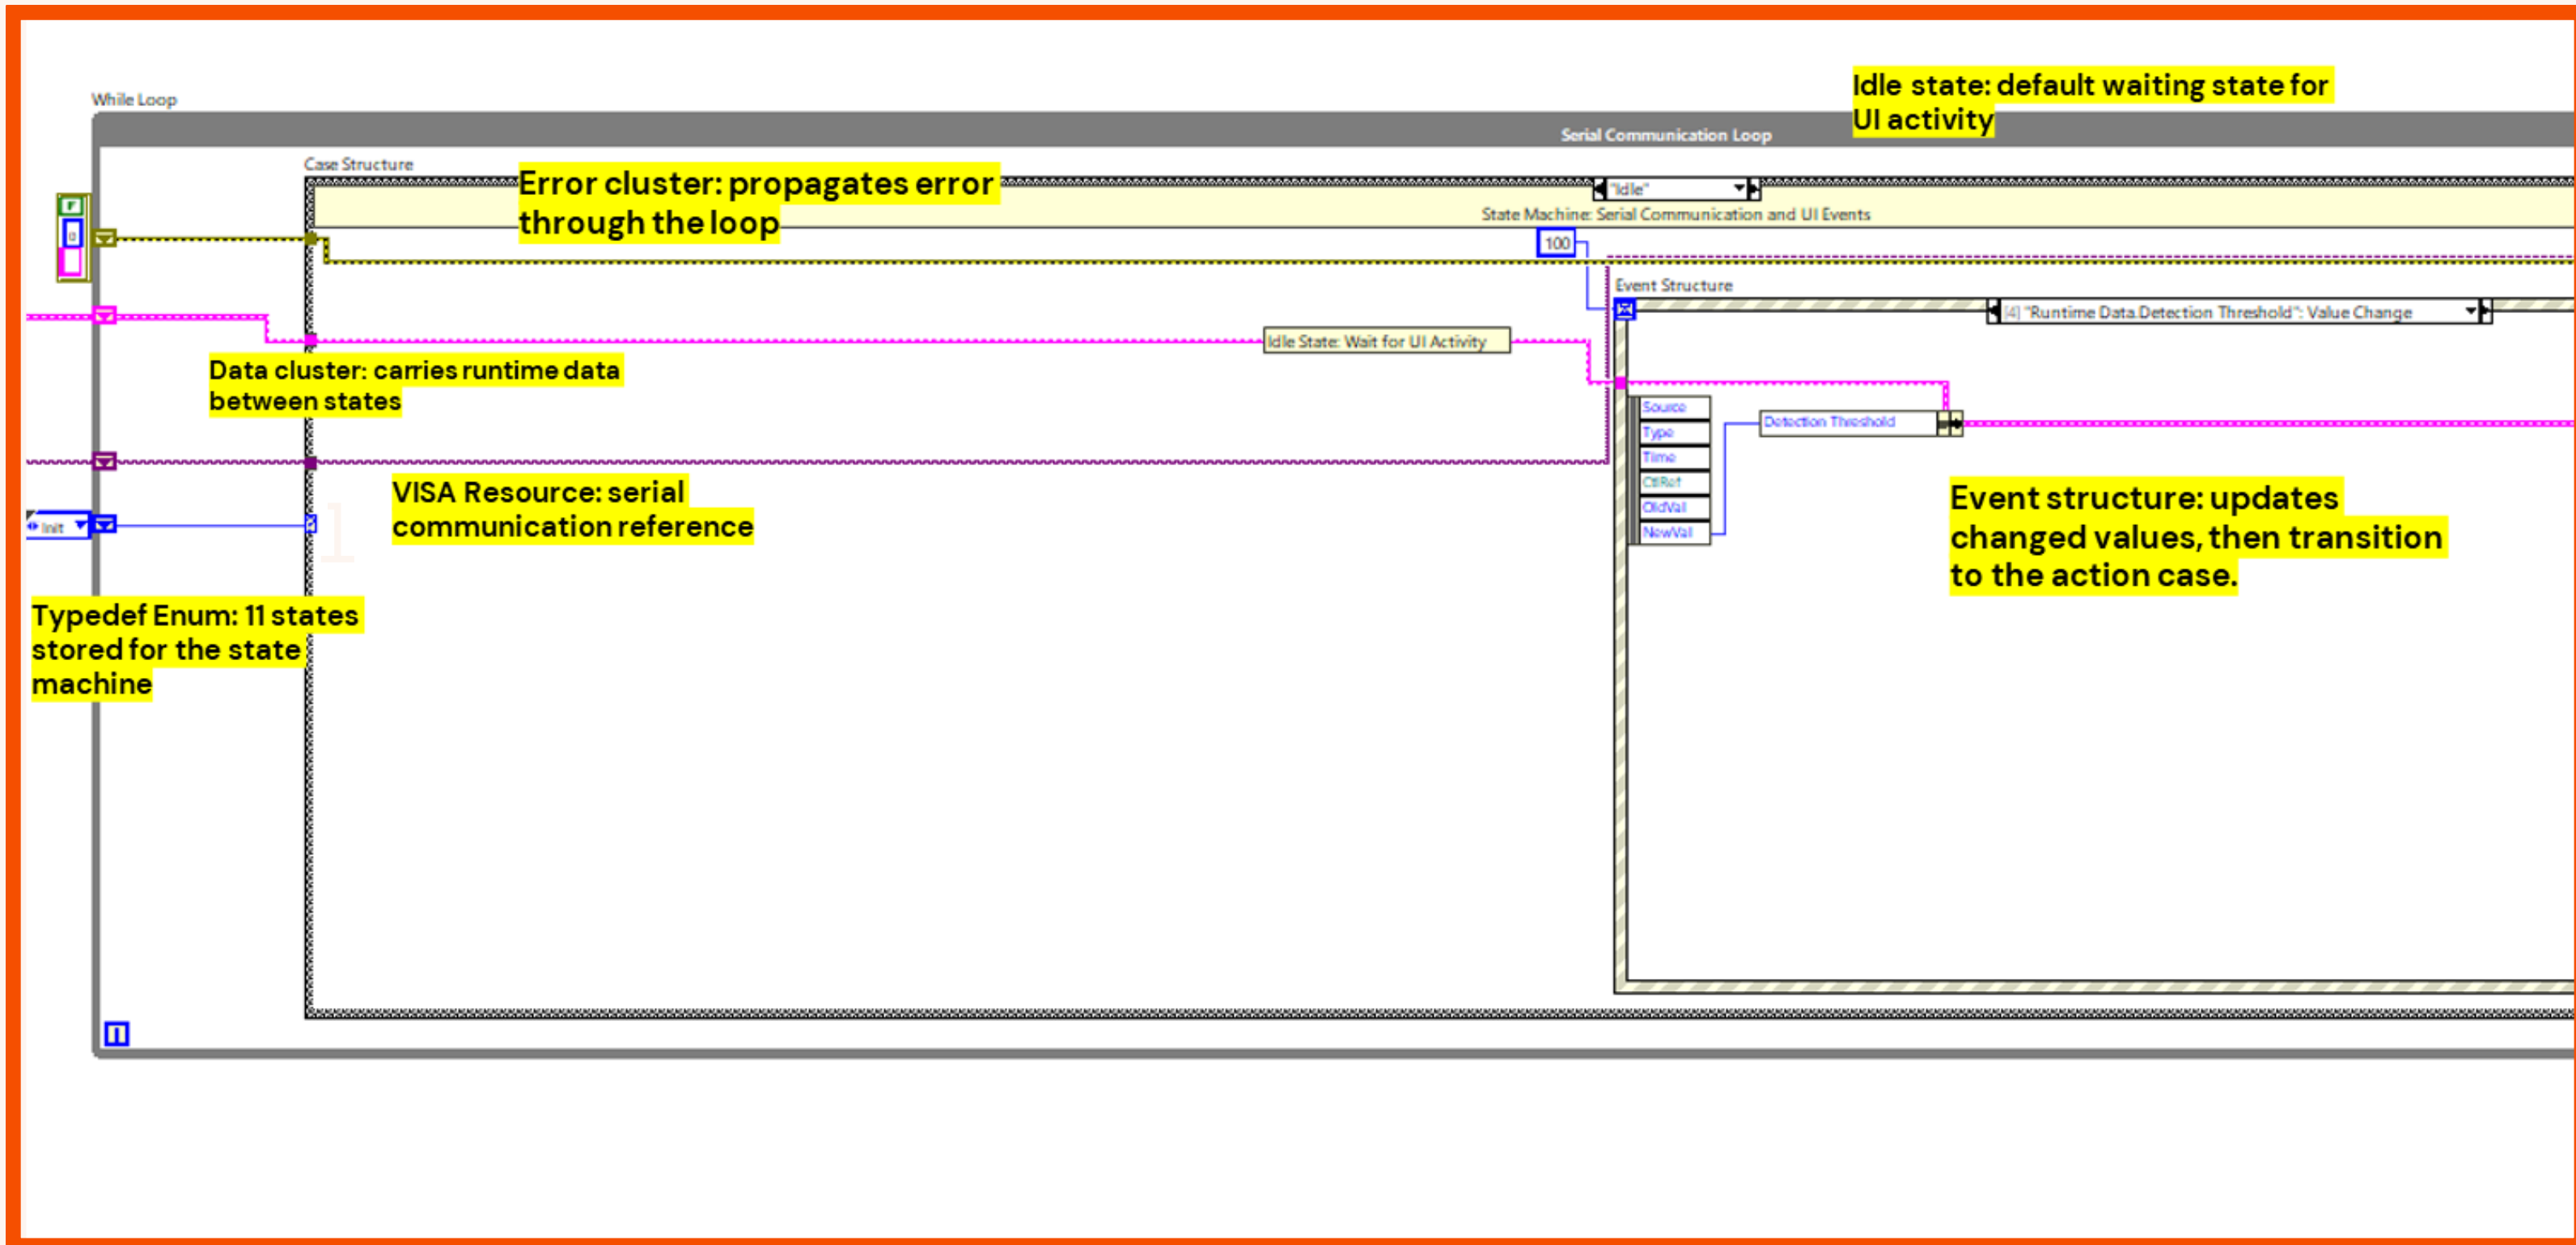

S (Status)

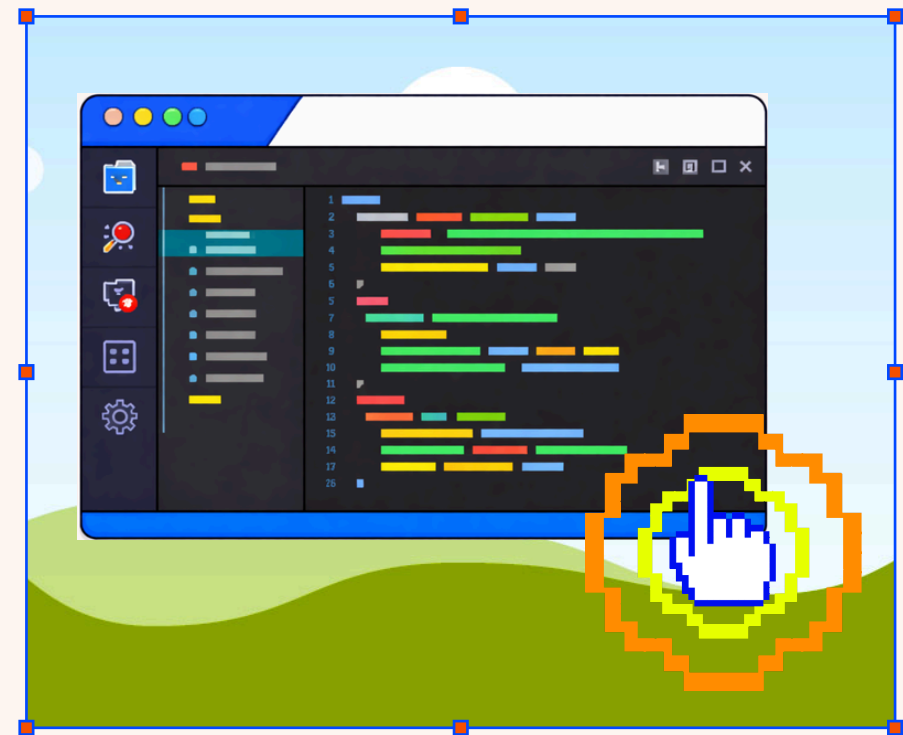

Requests a summary string of all current global variable states.

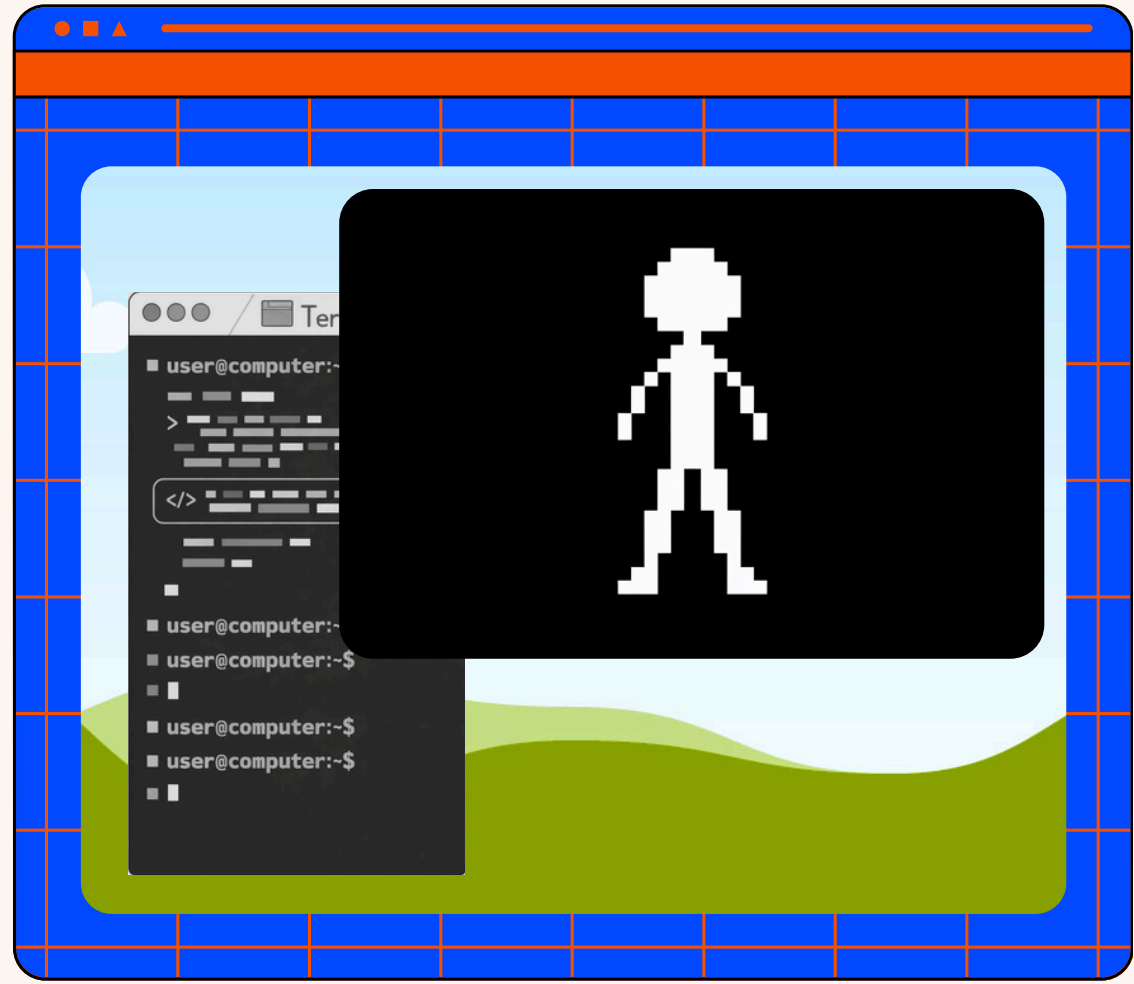

CURRENT PROGRESS - GUI

CURRENT PROGRESS GPU

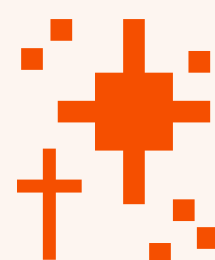

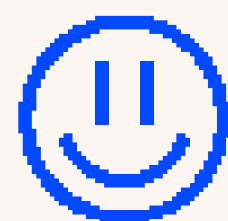

> GPU can currently connect to camera and run program indepently

> Connect GPU to LabVIEW gui via UART or WiFi
